

## ABSTRACT

The invention relates to a gray soda-lime silicate glass composition which comprises the following coloring agents with contents varying within the following weight limits:

Fe<sub>2</sub>O<sub>3</sub> (total iron) 0.01 to 0.14%

CoO 40 to 150 ppm

NiO 200 to 700 ppm

the NiO/CoO weight ratio being between 3.5 and 6 and the glass having an overall light transmission (TL<sub>D65</sub>) under illuminant D<sub>65</sub> of between 20 and 60% measured for a thickness of 6 mm. The invention also relates to a glass sheet, optionally thermally toughened, obtained from the aforementioned composition and glazing comprising at least one of these sheets, especially for buildings.
